UPM BIOVERNO NAPHTHA Date: 17th February 2022

Previous date: 24th August 2020

SECTION 1. IDENTIFICATION OF THE SUBSTANCE/MIXTURE AND OF THE COMPANY / UNDERTAKING

1.1	Product identifier	
	Commercial Product Name:	UPM BIOVERNO NAPHTHA
	Chemical name:	Renewable hydrocarbons of wood origin (gasoline type fraction)
	EC number:	700-918-8
	CAS number:	not assigned
	REACH registration number:	01-2120052681-60-0000
1.2	Relevant identified uses of the substan	ce or mixture and uses advised against
	Recommended use	Distribution, formulation and use as intermediate
		Use as a fuel and in coatings
	Uses Advised Against:	Only the uses covered by the exposure scenarios are recommended (see annex)
1.3	Details of the supplier of the safety dat	a sheet
	Supplier:	UPM-Kymmene Oyj
	Street address:	Alvar Aallon katu 1
	Postcode and post office:	PO Box 380, FI-00101 Helsinki
	Country:	Finland
	Telephone:	+358 204 15 111
	Email:	msds@upm.com
1.4	Emergency telephone number	
	Telephone number, name and address:	
		See section 16.6 for the list of telephone numbers of poison centres in the European Economic Area.
		Poison Centre, Tukholmankatu 17, PL 790, 00029 HUS (Helsinki), (24h)/+358 (0)9 4711, direct number +358 (0)9 471977

SECTION 2. HAZARDS IDENTIFICATION

This substance is classified as hazardous in accordance with the CLP regulation 1272/2008. This substance may cause genetic defects and cancer. It is suspected of damaging fertility or the unborn child. It may be fatal if swallowed and it may cause skin irritation if contact on skin. This substance is toxic to aquatic life with long lasting effects.

2.1 Classification of the substance or mixture

1272/2008 (CLP):

ALL 1. 1. A	
Skin Irrit. 2	H315
Asp. Tox. 1	H304
Repr. 2	H361fd
Muta. 1B	H340
Carc. 1B	H350
STOT Single Exp. 3	H336
Aquatic Chronic 2	H411

1272/2008 (CLP) GHS02 GHS07 GHS08 GHS0
--

UPM BIOVERNO NAPHTHA Date:

17th February 2022

Previous date: 24th August 2020

Signal word:	Danger	
Hazard Statements:	H225	Highly flammable liquid and vapour
	H315	Causes skin irritation
	H304	May be fatal if swallowed and enters airways
	H361	Suspected of damaging fertility or the unborn child via oral and inhalation exposure routes
	H340	May cause genetic defects via oral and inhalation exposure routes
	H350	May cause cancer
	H336	May cause drowsiness or dizziness via inhalation route
	H411	Toxic to aquatic life with long lasting effects
Precautionary Statements:		
	P210	Keep away from heat/sparks/open flames/ /hot surfaces No smoking.
	P273	Avoid release to the environment.
	P281	Use personal protective equipment as required.
	P302+P352	IF ON SKIN: Wash with plenty of soap and water.
	P308+P313	IF exposed or concerned: Get medical
		advice/attention.
	P331	Do NOT induce vomiting.
	P501	Dispose of contents/container to (according to local waste management regulations)
Note P:	The classification	as a carcinogen or mutagen need not to apply if it can be
		substance contains less than 0.1 % w/w benzene (EINECS No
	200-753-7). Whe	en the substance is not classified as a carcinogen at least the
	precautionary st	atements (P102-) P260-P262-P301 +P310-P331 (Table 3.1)
	or the S-phrases	(2-)23-24-62 (Table 3.2) shall apply. This note applies only
	to certain compl	ex oil-derived substances in Part 3 of Annex VI.

2.3 Other hazards

The criteria for PBT and vPvB are not met and this substance is not hazardous to ozone layer.

UPM BIOVERNO NAPHTHA Date: 17th February 2022

Previous date: 24th August 2020

SECTION 3. COMPOSITION / INFORMATION ON INGREDIENTS

3.1 Substances

This substance is an UVCB substance and predominantly rich in saturated hydrocarbons with a carbon number range from C6 to C10.

EC number:	CAS number:	Chemical name of the substance:	Concentratio	on:	Classification:
700-918-8	-	Renewable hydrocarbons of wood	100 %	(w/w)	1272/2008 (CLP):
		origin (gasoline type fraction)			Flam. Liquid 2 H225
					Skin Irrit. 2 H315
					Asp. Tox. 1 H304
					Repr. 2 H361fd
					Muta. 1B H340
					Carc. 1B H350
					STOT Single Exp. 3 H336
					Aquatic Chronic 2 H411

3.3 Other information

This substance is predominantly rich in saturated hydrocarbons with a carbon number range from C6 to C10. The substance contains benzene $\ge 0.1 - < 1.0 \%$ (w/w), toluene $\ge 0.0 - < 5.0 \%$ (w/w) and n-hexane $\ge 0.0 - < 5.0 \%$ (w/w).

SECTION 4. FIRST AID MEASURES

4.1	Description of first aid measures			
	Inhalation:	Remove the affected person to fresh air. If breathing has stopped, administer artificial respiration. Give cardiac massage if necessary. If the affected person is breathing but unconscious, place in recovery position. Obtain medical assistance immediately.		
	Skin contact:	Flush the contaminated skin with water. Use soap if available. Contaminated clothing should be soaked with water, removed, and laundered before reuse. If skin irritation persists, consult a physician.		
	Eye contact:	Rinse immediately with plenty of water, also under the eyelids. Continue irrigation for several minutes while moving eyes to extreme positions. Consult a physician.		
	Ingestion:	DO NOT INDUCE VOMITING. Obtain medical assistance immediately (risk of aspiration into the lungs especially if nausea or irritation occurs). If vomiting occurs, help to keep the victim's head down so that aspiration to the lungs will not occur.		

Previous date: 24th August 2020

4.2 Most important symptoms and effects, both acute and delayed

Irritating to skin. Aspiration into the lungs may be fatal. Over-exposure leads to drowsiness, dizziness and finally to narcosis.

4.3 Indication of immediate medical attention and special treatment needed Show this safety data sheet to the doctor in attendance. Treat symptomatically.

SECTION 5. FIRE FIGHTING MEASURES

5.1 **Extinguishing media** Suitable extinguishing media: Large fires: Foam, dry chemical. Small fires: Carbon dioxide, sand, earth. Extinguishing media which must Water. not be used for safety reasons: 5.2 Special hazards arising from the substance or mixture Hazards from the substance: Highly flammable liquid and vapour. Explosion risk if product tanks and containers are subjected to fire. The product floats and may reignite on water. Electrostatic charges may be generated during pumping process. Hazardous combustion products: A complex mixture of airborne solids, liquids and gases, including carbon monoxide, sulphur oxides and other organic and inorganic compounds will be evolved when this material undergoes combustion 5.3 Advice for fire-fighters

Special precautions for fire-fighters: Keep of Special protective equipment for fire- A selffighters: be wo

Keep containers cool with water spray remotely due to the risk of explosion. A self-contained breathing apparatus and suitable protective clothing should be worn in fire conditions.

SECTION 6. ACCIDENTAL RELEASE MEASURES

6.1 Personal precautions, protective equipment and emergency procedures

For non-emergency personnel:	Avoid inhalation of vapour and contact with skin. Evacuate people upwind
	from the spill area. Remove all ignition sources. Stop the leak if it can be
	done safely. Use appropriate personal protection equipment.
For emergency responders:	If specialised clothing is required to deal with the spillage, take note of any information in Section 8 on suitable and unsuitable materials. Use non-
	sparking tools.

6.2 Environmental precautions

Prevent entry into municipal sewers, soil and waterways. If the product contaminates soil, watercourses or drainage systems, inform the local authorities.

6.3 Methods and materials for containment and cleaning up

Immediately start clean-up of the liquid and contaminated soil. Pay attention to the fire and health hazards caused by the product. Small volumes can be absorbed with inert materials (e.g. sand, diatomaceous earth, commercial absorbent) and collect in suitable labelled containers to be disposed of in accordance with local regulations. Large volumes should be pumped into containers. Ensure adequate ventilation.

6.4 Reference to other sections

See also section 8 and exposure scenarios in Annexes.

UPM BIOVERNO NAPHTHA Date: 17th February 2022

Previous date: 24th August 2020

SECTION 7. HANDLING AND STORAGE

7.1 Precautions for safe handling

Keep away from sources of ignition. Take precautionary measures (e.g. earthing) against static discharges. Handle the product in closed systems or provide sufficient ventilation to keep the air concentrations under the explosion limits. Avoid skin contact and inhalation of oil mist. Wear protective equipment when needed (see point 8.2.). Thoroughly clean contaminated skin and change dirty clothing and equipment. It is prohibited to eat, drink and smoke during the product handling. During tank operations follow special instructions (risk of oxygen displacement and hydrocarbons).

7.2 Conditions for safe storage, including any incompatibilities

Store in tightly sealed, appropriately labelled containers which are impermeable to the product. Store in containers and areas suitable for the storage of combustible liquids. Take precautionary measures to prevent product spills into municipal sewers, soil or water courses.

7.3 Specific end use(s)

The exposure scenarios for identified industrial and professional uses are presented in the Annexes of this SDS.

List of Exposure Scenarios:

ES 1 Distribution, use as an intermediate and formulation & (re)packing of renewable naphtha and mixtures (containing 0% to 1% benzene)

- ES 2 Industrial uses of renewable naphtha in coatings (containing 0% to 1% benzene)
- ES 3 Industrial use of renewable naphtha as a fuel (containing 0% to 1% benzene)
- ES 4 Professional use of renewable naphtha as a fuel (containing 0% to 1% benzene)

SECTION 8. EXPOSURE CONTROLS / PERSONAL PROTECTION

8.1 **Control parameters**

Occupational exposure limits (OELs) for the critical components in the renewable naphtha (benzene, n-hexane and toluene)

	15-min TWA	ppm (mg/m³)		8-hour TWA	(mg/m ³)	
Country	n-Hexane	Toluene	Benzene	n-Hexane	Toluene	Benzene
EU				20 (72)		1 (3.25)
Finland		100 (380)			25 (81)	
Belgium					50 (191)	
Denmark					25 (95)	
United Kingdom		150 (560)			50 (190)	
Germany		950 ⁽¹			50 (190)	
US			5	50 (176)	50 (190)	1 (3.2)

(1 30-min TWA

DNELs

The critical DNELs for workers: Inhalation-systemic-long-term effects: DMEL (Derived Minimum Effect Level) = 3.25 mg/m³. DMEL value is based on the Binding Occupational Exposure Limit value (BOELV) for benzene, the most hazardous constituent in the substance. BOELV can be used in place of a formal DN(M)EL provided no new scientific information exists which challenges the validity of the BOELV.

8.2

UPM BIOVERNO NAPHTHA Date: 17th February 2022

Previous date: 24th August 2020

	Dermal-systemic-long-term effects: DMEL (Derived Minimum Effect Level): 234 mg/kg bw/day. The dermal DMEL is extrapolated from the BOELV for benzene (3.2 mg/m ³).
	Dermal-local-long-term effects: Low hazard is assigned as the substance is classifi for as skin irritant. The appropriate RMMs are in use to avoid skin contact (See
	section 8.2 and Annex).
The critical DNELs for consumers:	Inhalation-systemic-long-term effects: DMEL (Derived Minimum Effect Level) = 3. $\mu g/m^3$ is based on the carcinogenicity risk caused by the most hazardous compone i.e. benzene.
	Dermal-systemic-long-term effects: DMEL (Derived Minimum Effect Level): 234 $\mu g/kg$ bw/day. The dermal DMEL is extrapolated from the inhalation DMEL for benzene (3.25 $\mu g/m^3$).
	Oral-systemic-long-term effects: DMEL (Derived Minimum Effect Level): 0.234 μ g bw/day. The oral DMEL is extrapolated from the inhalation DMEL for benzene (3.2 μ g/m ³).
PNECs	
	PNEC (freshwater and marine water): The overall range (all representative components of the substance) for the PNEC(aqueous) values estimated with the
	PETRORISK tool are from 0.88 μ g/L to 2100 μ g/L. PNEC (sediment freshwater and marine water): The overall range (all representa
	components of the substance) for the PNEC(sediment) values estimated with the PETRORISK tool are from 0.33 mg/kg ww to 6.7 mg/kg ww.
	PNEC (sewage treatment plant): The overall range (all representative component the substance) for the PNEC(wastewater) values estimated with the PETRORISK to are from 13 μ g/L to 34 000 μ g/L.
	PNEC (soil): The overall range (all representative components of the substance) for the PNEC(soil) values estimated with the PETRORISK tool are from 0.13 mg/kg ww 2.7 mg/kg ww.
Exposure controls	
Appropriate engineering cor	ntrols: Provide good general ventilation (3-5 air changes per hour). Provide local exhaust ventilation for points of potential exposure (see
Individual protection measu	annexes). ures: <u>Respiratory protection</u> Use substance/task appropriate respirator with filter type ABEKP3.
Individual protection measu	annexes). ures: <u>Respiratory protection</u> Use substance/task appropriate respirator with filter type ABEKP3. <u>Hand protection</u> Use chemical resistant gloves (EN374).
Individual protection measu	annexes). ures: <u>Respiratory protection</u> Use substance/task appropriate respirator with filter type ABEKP3. <u>Hand protection</u> Use chemical resistant gloves (EN374). <u>Eye/face protection</u>

SECTION 9. PHYSICAL AND CHEMICAL PROPERTIES

9.1	Important Health Safety and Environmental Information					
	Appearance:	Colourless, bright and clear	r liquid			
	Odour:	A typical hydrocarbon odour				
	Odour threshold:	No data available				
	pH:	No data available				
	Melting point/freezing point:	< -50 °C at 101.3 kPa (pour point, DIN ISO 3016)				
	Initial boiling point and boiling range:	40 -190 °C (typical at 101.3 kPa (EN ISO 3405)				
	Flash point:	10 °C (ASTM D93 closed cup)				
	Evaporation rate:	Not known				
	Flammability (solid, gas):	Highly flammable				
	Explosive properties:	Non explosive (EU A.14) Lower explosion limit: No information available				
		Upper explosion limit: No information available				
	Vapour pressure:	: typical 35 kPa at 38 °C (DIN EN 13016-1)				
	Vapour density:	Not known				
	Density:	720-775 kg/m ³ at 15°C (EN ISO12185)				
	<u>Solubility(ies):</u>					
		Water solubility	18 mg/L at 25 $^{\circ}$ C(partly soluble)			
		Fat solubility:	No information available			
	Partition coefficient: n-octanol/water:	Log Kow 4.7 at 22 °C (EU A.8)				
	Auto-ignition temperature:	> 240 °C (EU A.15)				
	Decomposition temperature:	Not known				
	Viscosity:	Kinematic viscosity < 1 mm ² /s at 38 °C (DIN EN ISO 3104)				
	Explosive properties	Non explosive (EU A.14)				
	Oxidising properties:	Not oxidising				
9.2	Other information:					
	Adsorption coefficient (log Koc)	The overall range (all comp	oonents) for the estimated log Koc values are from			

1.83 to 5.20 (PETRORISK modelling)

SECTION 10. STABILITY AND REACTIVITY

- 10.1 Reactivity Not reactive under normal use and storage conditions.
 10.2 Chemical stability
 - Chemically stable under normal storage conditions.
- 10.3 Possibility of hazardous reactions

Under normal conditions of storage and use hazardous reactions will not occur.

- 10.4 Conditions to avoid
 - Keep away from ignition sources.
- **10.5** Incompatible materials None known.

10.6 Hazardous decomposition products

None known. Thermal decomposition and burning may produce irritating or toxic fumes.

UPM BIOVERNO NAPHTHA Date: 17th February 2022

Previous date: 24th August 2020

SECTION 11. TOXICOLOGICAL INFORMATION

11.1	Information on toxicological effects				
Basic toxicokinetics: There a conduct		conducted quali	re are no experimental studies available and the assessment has been ducted qualitatively on the basis of the physical and chemical properties the toxicokinetic information from the constituents of the substance.		
	Absorption:	Occurs via oral and dermal routes. Absorption by the lung is also expected. Expected to distribute mainly to fat tissue. Based on the available data aliphatic hydrocarbons and aromatic			
	Distribution:				
	Metabolism:				
	Excretion	Based on the ava	e oxidised to various alcohol and carboxylic acid derivatives. ailable data aliphatic and aromatic hydrocarbons and their rapidly excreted, either exhaled from the lungs or excreted		
	Acuto toxicity:	Oral:	LD50 (rat) > 2000 mg/kg bw/day (OECD 420)		
	Acute toxicity:	Inhalation:	LC50 (rat) 23400 mg/m ³ (8-hour exposure; volatile		
		Dermal:	constituent in the substance; nonane) LD50 (rabbit) 2920 mg/kg bw/day (rabbits were exposed to similar UVCB substance)		
	Skin irritation and corrosion:	The substance is	irritating to skin based on the in vitro study (OECD 439)		
	Serious eye damage/irritation		not Irritating to eyes based on the in vitro HCE study and ults on analogue substance fossil naphtha.		
	Sensitisation:	Not sensitising b 406).	ased on the Guinea Pig Maximisation Test (GPMT) (OECD		
	Germ cell mutagenicity:	(OECD 471). Alth mutagenicity, th	vas non-mutagenic in bacterial reverse mutagenicity test nough this single study does not support the classification for is substance is regarded as germ cell mutagen based on the t in the substance.		
	Carcinogenicity:	The substance is	considered carcinogenic based on the benzene content.		
	Reproductive toxicity:	This substance is suspected of damaging fertility and the unborn child on the n-hexane and toluene content. Over-exposure to substance leads to dizziness and nausea and causes narcosis.			
	STOT-single exposure:				
	STOT-repeated exposure:	n-hexane, toluer	as not been classified for STOT-RE. This substance contains ne and benzene which have harmonised classification for rer, based on the CLP mixtures rules no classification of this rranted.		
	Aspiration hazard:	Based on the kin hazard.	ematic viscosity the substance is classified for aspiration		
11.2	Other information:				
		No other advers	e ettects known.		

UPM BIOVERNO NAPHTHA Date: 17th February 2022

Previous date: 24th August 2020

SECTION 12. ECOLOGICAL INFORMATION

12.1	Toxicity	
	Aquatic toxicity:	This substance is classified as hazardous to the aquatic environment (Aquatic chronic 2 H411)
	<u>Short-term toxicity:</u>	
	Fish:	96-h LL50(mortality, <i>Oncorhynchus mykiss</i>): 10 mg/l (OECD 203); analogue substance fossil gasoline
	Invertebrates:	48-h EL50(immobilisation; <i>Daphnia magna</i>) 7.6 mg/l (OECD 202) analogue substance fossil gasoline
	Algae:	72-h EL50 (growth rate; <i>Desmodesmus subspicatus</i>) > 100 mg/l (OECD 201)
	Toxicity to other organisms:	Toxicity to activated sludge respiration: EL10 (3h): 34.78 mg/l (OECD 209)
12.2	Persistence and degradability	
		Biodegradation- % 77 after 28 days. (OECD 301F Ready Biodegradability Manometric Respirometry test). Substance contains both non-biodegradable hydrocarbons and readily biodegradable hydrocarbons. Hydrolytically stable.
12.3	Bioaccumulative potential	
		This is a general term describing a process by which chemicals are taken up by aquatic organisms directly from water as well as from exposure through other routes, such as consumption of food and sediment containing the chemicals. The range of log Kow values and BCF-factors indicate that there might be constituents present in the substance having potential for bioaccumulation. However, there is evidence that the majority of organic chemicals with log Pow values of > ca. 7 would show low tendency to bioaccumulate.
12.4	Mobility in soil	
		Based on low water solubility and relatively high volatility and absorption potential to organic matter the migration to groundwater is expected to be low. According to the PETRORISK modelling results, major part of the emissions of the substance are distributed to air (ca. 97.6 %). Fractions distributed to other environmental compartments is expected to be low; water (1.7 %), sediment (0.45 %), soil (0.25 %).
12.5	Results of PBT and vPvB assessment	
	Persistent:	This substance is persistent since it contains both biodegradable and non- biodegradable constituents. It is however considered as readily biodegradable in water.
	Bioaccumulation:	Based on test results from the octanol-water partitioning coefficient study (log Kow of 4.7) the substance might contain substances having potential for bioaccumulation. Bioconcentration factors and bioaccumulation factors were also estimated with the BCFBAF v3.01 model. The estimated log BCF value for the ten most abundant individual structures of the substance ranged from 2.02 to 3.08 (BCF 105 to 1202 L/kg). In conclusion, as the estimated BCF values are less than B or vB criteria (2000 and 5000 L/kg) this substance is not bioaccumulative or very bioaccumulative.
	Toxic: Overall conclusions:	The substance is toxic as this substance is classified as carcinogenic, mutagenic and toxic for reproduction. The criteria for PBT or vPvB are not met.
		הוב נהוננהם וסו דםו סו ידים מוכ חסו חופו.

UPM BIOVERNO NAPHTHA Date: 17th February 2022

Previous date: 24th August 2020

12.6 Other adverse effects

The substance has no potential for stratospheric ozone depletion for structural reasons. No reason for any hazard classification under CLP for atmospheric environment (the ozone layer).

SECTION 13. DISPOSAL CONSIDERATIONS

13.1 Waste treatment methods

Waste should only be disposed of via a licensed waste contractor. The European Waste Catalogue (EWC) and European Waste List (EWL) is a harmonized list of wastes. Waste materials should be classified prior to final disposal with EWC-codes. Wastes and empty containers should be treated based on their classification and properties referring to local and national waste management regulations.

Waste management options:	All waste containing residues of the substance should be disposed of as hazardous waste to authorized hazardous waste incineration plants, operated according to Directive 2008/98/EC on waste, Directive 2000/76/EC on the incineration of waste and Best Available Techniques for Waste Incineration as described in the respective BREF of August 2006. Based on the waste type and the fulfilment of the acceptance criteria of the Council Directive 1999/31/EC additional waste management methods such as landfill disposal might be used.				
Packaging:	The generation of waste should be avoided or minimized wherever possible. Dispose of surplus and non-recyclable products via a licensed waste disposal contractor. Contaminated packaging: Contaminated packaging should be emptied as far as possible and disposed of as hazardous waste to incineration plants in accordance with Directive 2000/76/EC. Clean packaging material should be				
	subjected to waste management schemes (recovery, recycling, re-use) according to local waste management regulations.				
Special precautions:	The substance and its container must be disposed of in a safe way. Care should be taken when handling emptied containers that have not been cleaned or rinsed out. Empty containers or liners may retain some product residues. Avoid dispersal of spilt material and runoff and contact with soil, waterways, drains and sewers.				
Waste from residues / unused	Off-specification batches and unused products should be treated as				
products:	hazardous waste.				
	Suitable waste codes: 16 03 05 * Organic wastes containing dangerous substances				
	15 02 02* Absorbents, filter materials (including oil filters not otherwise specified), wiping cloths, protective clothing contaminated by dangerous substances				
	15 01 10* Packaging containing residues of or contaminated by dangerous substances				

SECTION 14. TRANSPORT INFORMATION

16.3 Key literature references and sources for data

REACH Chemical Safety Report: Renewable hydrocarbons of wood origin (naphtha type fraction) dated 2022-02-15. All referenced studies within this safety data sheet can be found from the original Chemical Safety Report.

16.4 Classification procedure

The self-classification is conducted based on the experimental data on the substance and the read-across data on similar fossil fuels taken into account also the harmonised classification entries of fossil fuels, and the critical components in the renewable fuels (benzene, n-hexane and toluene). For long-term health hazards, the CLP mixture rules were applied when there was no adequate experimental data on the substance available.

DISCLAIMER OF LIABILITY:

The information in this SDS was obtained from recent Chemical Safety Report of this substance from REACH registration. However, the information is provided without any warranty, express or implied, regarding its correctness. The conditions or methods of handling, storage, use or disposal of the product are beyond our control and may be beyond our knowledge. For this and other reasons, we do not assume responsibility and expressly disclaim liability for loss, damage or expense arising out of or in any way connected with the handling, storage, use or disposal of the product. This SDS was prepared and is to be used only for this product. If the product is used as a component in another product, this SDS information may not be applicable.

3. Exposure estimation and reference to its source

Environment: PETRORISK v6.02 risk assessment tool. The model calculations are based on physicochemical and ecotoxicological properties of individual hydrocarbon structures, so that PEC and PNEC and the risk chracterisation by RCR are derived for representative structures that are used to simulate the UVCB substance. The sum of all individual RCR values indicates the overall risk for the substance as the environmental effects of the individual components are considered additive. RCR = PEC/PNEC, RCR value below 1 indicates safe use. PNEC determined by the PETRORISK tool for each representative constituent, range of PNEC values: PNECwastewater= 13 µg/L to 34 000 µg/L, PNECaquatic= 0.88 µg/L to 2100 µg/L, PNECsoil= 0.13 mg/kg ww to 2.7 mg/kg ww, PNECsediment= 0.33 mg/kg ww to 6.7 mg/kg ww. The environmental emission assessment is based on SPERC developed by ESIG/ESVOC.

Worker: CHESAR v. 2.2 - ECETOC TRA v. 3. RCR = Exposure estimate/DMEL, RCR value below 1 indicates safe use. Semi-quantitative assessment: long-term systemic effects (inhalation, dermal). Qualitative assessment: skin irritation, aspiration toxicity, and carcinogenic effects.

Environment

Local exposure estimation and risk characterisation

The predicted exposure concentrations (PEC) and risk characterisation ratios (RCR) are reported in the following table. Concentration range for Distribution scenario is given for different end use scenarios (fuels, intermediate, coatings)

Risk characterisation for man via the environment

Exposure estimation and risk characterisation was conducted quantitatively with the PETRORISK tool for indirect human exposure (inhalation, oral). According to modelling results, the estimated exposure level is low (combined RCR ranging from < 0.001 to 0.2).

Worker exposure

Quantitative assessment (long-term, systemic effects, inhalation and dermal route)

Estimated exposure via inhalation and dermal route and the corresponding risk characterisation ratios (RCR) are reported in the below table. Combined RCR = inhalation + dermal. DMEL(inhalation) = 3.25 mg/m³, DMEL(dermal) = 234 mg/kg bw/day.

General process exposures - closed continuous process (with sampling)	PROC 2	0.57	0.175	0.027	<0.01	0.175

Qualitative assessment

When implementing the presented conditions of use the risk level for systemic long term inhalation and dermal effects is low (RCR < 1), and contact with the substance is prevented/reduced so that adverse effects are avoided regarding skin irritancy, and carcinogenic and mutagenic effects. Aspiration toxicity: Oral exposure is not anticipated to be related to any of the supported uses. RMM to avoid contact or incidents by workers: do not ingest, implementation of basic standard of occupational hygiene, ensure adequate training and supervision, good standard of personal hygiene.

4. Guidance to DU to evaluate whether he works inside the boundaries set by the ES

Environment

The exposure assessment and risk characterization for environment was conducted by using PETRORISK v6.02 model. The assessment indicates safe use when the recommended operational conditions and risk management measures are in use. See the relevant SPERC for additional information.

Human health exposure

The exposure assessment and risk characterization for inhalation exposure of workers was conducted by using Tier 1 ECETOC TRA v.3 model. The assessment indicates safe use when the recommended operational conditions and risk management measures are in use. Scaling of worker exposure can be done by using ECETOC TRA v.3 model by modifying the operational conditions.

Compliance can also be verified by monitoring, and by comparing the monitored level with the DMEL value. The use is considered safe if the measured emissions divided by the DMEL-value is resulting in a risk characterisation ratio (RCR) less than 1.

This exposure scenario does not address consumers or professional workers.

Other given operational conditions affecting environmental exposure

The environmental emission assessment is based on SPERC developed by ESIG/ESVOC.

Substance losses are reduced through use of general and site-specific risk management measures to maintain workplace concentrations of airborne VOCs and particulates below respective OELs; and through use of closed or covered equipment/processes to minimize evaporative losses of VOCs. Substance losses to waste water are generally restricted to equipment cleaning as processes operate without contact with water. Such uses and substance properties result in limited to no discharge to wastewater or to soil from the industrial site.

Technical conditions and measures to reduce or	innit discharges, air emissions and	releases to soli

Additional good practise advice beyond the REACH CSA

Note: The measures reported in this section have not been taken into account in the exposure estimates related to the exposure scenario above. They are not subject to obligation laid down in Article 37 (4) of REACH, Thus, the downstream user is not obliged to i) carry out an own CSA and ii) to notify the use to the Agency, if he does not implement these measures.

Housekeeping: General good hygiene and housekeeping

PROC1: Eye protection: Goggles or safety glasses with side shields (EN166) Eye protection where there is potential for exposure.

3. Exposure estimation and reference to its source

Environment: PETRORISK v6.02 risk assessment tool. The model calculations are based on physicochemical and ecotoxicological properties of individual hydrocarbon structures, so that PEC and PNEC and the risk chracterisation by RCR are derived for representative structures that are used to simulate the UVCB substance. The sum of all individual RCR values indicates the overall risk for the substance as the environmental effects of the individual components are considered additive. RCR = PEC/PNEC, RCR value below 1 indicates safe use. PNEC determined by the PETRORISK tool for each representative constituent, range of PNEC values: PNECwastewater= 13 µg/L to 34 000 µg/L, PNECaquatic= 0.88 µg/L to 2100 µg/L, PNECsoil= 0.13 mg/kg ww to 2.7 mg/kg ww, PNECsediment= 0.33 mg/kg ww to 6.7 mg/kg ww. The environmental emission assessment is based on SPERC developed by ESIG/ESVOC.

Worker: CHESAR v. 2.2 - ECETOC TRA v. 3. RCR = Exposure estimate/DMEL, RCR value below 1 indicates safe use. Semi-quantitative assessment: long-term systemic effects (inhalation, dermal). Qualitative assessment: skin irritation, aspiration toxicity, and carcinogenic effects.

Qualitative assessment

When implementing the presented conditions of use the risk level for systemic long term inhalation and dermal effects is low (RCR < 1), and contact with the substance is prevented/reduced so that adverse effects are avoided regarding skin irritancy, and carcinogenic and mutagenic effects. Aspiration toxicity: Oral exposure is not anticipated to be related to any of the supported uses. RMM to avoid contact or incidents by workers: do not ingest, implementation of basic standard of occupational hygiene, ensure adequate training and supervision, good standard of personal hygiene.

4. Guidance to DU to evaluate whether he works inside the boundaries set by the ES

Environment

The exposure assessment and risk characterization for environment was conducted by using PETRORISK v6.02 model. The assessment indicates safe use when the recommended operational conditions and risk management measures are in use. See the relevant SPERC for additional information.

Human health exposure

The exposure assessment and risk characterization for inhalation exposure of workers was conducted by using Tier 1 ECETOC TRA v.3 model. The assessment indicates safe use when the recommended operational conditions and risk management measures are in use. Scaling of worker exposure can be done by using ECETOC TRA v.3 model by modifying the operational conditions.

Compliance can also be verified by monitoring, and by comparing the monitored level with the DMEL value. The use is considered safe if the measured emissions divided by the DMEL–value is resulting in a risk characterisation ratio (RCR) less than 1.

This exposure scenario does not address consumers or professional workers.

Additional good practise advice beyond the REACH CSA

Note: The measures reported in this section have not been taken into account in the exposure estimates related to the exposure scenario above. They are not subject to obligation laid down in Article 37 (4) of REACH, Thus, the downstream user is not obliged to i) carry out an own CSA and ii) to notify the use to the Agency, if he does not implement these measures.

Housekeeping: General good hygiene and housekeeping

PROC1, PROC16: Eye protection: Goggles or safety glasses with side shields (EN166) Eye protection where there is potential for exposure.

3. Exposure estimation and reference to its source

Environment: PETRORISK v6.02 risk assessment tool. The model calculations are based on physicochemical and ecotoxicological properties of individual hydrocarbon structures, so that PEC and PNEC and the risk chracterisation by RCR are derived for representative structures that are used to simulate the UVCB substance. The sum of all individual RCR values indicates the overall risk for the substance as the environmental effects of the individual components are considered additive. RCR = PEC/PNEC, RCR value below 1 indicates safe use. PNEC determined by the PETRORISK tool for each representative constituent, range of PNEC values: PNECwastewater= 13 µg/L to 34 000 µg/L, PNECaquatic= 0.88 µg/L to 2100 µg/L, PNECsoil= 0.13 mg/kg ww to 2.7 mg/kg ww, PNECsediment= 0.33 mg/kg ww to 6.7 mg/kg ww. The environmental emission assessment is based on SPERC developed by ESIG/ESVOC.

Worker: CHESAR v. 2.2 - ECETOC TRA v. 3. RCR = Exposure estimate/DMEL, RCR value below 1 indicates safe use. Semi-quantitative assessment: long-term systemic effects (inhalation, dermal). Qualitative assessment: skin irritation, aspiration toxicity, and carcinogenic effects.

Qualitative assessment

When implementing the presented conditions of use the risk level for systemic long term inhalation and dermal effects is low (RCR < 1), and contact with the substance is prevented/reduced so that adverse effects are avoided regarding skin irritancy, and carcinogenic and mutagenic effects. Aspiration toxicity: Oral exposure is not anticipated to be related to any of the supported uses. RMM to avoid contact or incidents by workers: do not ingest, implementation of basic standard of occupational hygiene, ensure adequate training and supervision, good standard of personal hygiene.

4. Guidance to DU to evaluate whether he works inside the boundaries set by the ES

Environment

The exposure assessment and risk characterization for environment was conducted by using PETRORISK v6.02 model. The assessment indicates safe use when the recommended operational conditions and risk management measures are in use. See the relevant SPERC for additional information.

Page **30 / 35** Version 4.0

Human health exposure

The exposure assessment and risk characterization for inhalation exposure of workers was conducted by using Tier 1 ECETOC TRA v.3 model. The assessment indicates safe use when the recommended operational conditions and risk management measures are in use. Scaling of worker exposure can be done by using ECETOC TRA v.3 model by modifying the operational conditions.

Compliance can also be verified by monitoring, and by comparing the monitored level with the DMEL value. The use is considered safe if the measured emissions divided by the DMEL–value is resulting in a risk characterisation ratio (RCR) less than 1.

This exposure scenario does not address consumers or professional workers.

Qualitative assessment

When implementing the presented conditions of use the risk level for systemic long term inhalation and dermal effects is low (RCR < 1), and contact with the substance is prevented/reduced so that adverse effects are avoided regarding skin irritancy, and carcinogenic and mutagenic effects. Aspiration toxicity: Oral exposure is not anticipated to be related to any of the supported uses. RMM to avoid contact or incidents by workers: do not ingest, implementation of basic standard of occupational hygiene, ensure adequate training and supervision, good standard of personal hygiene.

4. Guidance to DU to evaluate whether he works inside the boundaries set by the ES

Environment

The exposure assessment and risk characterization for environment was conducted by using PETRORISK v6.02 model. The assessment indicates safe use when the recommended operational conditions and risk management measures are in use. See the relevant SPERC for additional information.

Human health exposure

The exposure assessment and risk characterization for inhalation exposure of workers was conducted by using Tier 1 ECETOC TRA v.3 model. The assessment indicates safe use when the recommended operational conditions and risk management measures are in use. Scaling of worker exposure can be done by using ECETOC TRA v.3 model by modifying the operational conditions.

Compliance can also be verified by monitoring, and by comparing the monitored level with the DMEL value. The use is considered safe if the measured emissions divided by the DMEL-value is resulting in a risk characterisation ratio (RCR) less than 1.

This exposure scenario does not address consumers or industrial workers.
